

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

half past 0; and at the distance of 25° , from Regulus. Denebola in the Lion's Tail, is above her to the north.

Fifteenth, She passes the meridian, at 17 min. after 11 o'clock, A.M. having risen about 7, and will set this evening at a quarter past three.

Twentieth, She sets this evening, about 8, having passed the mer. at 12 min. past 3 o'clock.

Twenty-fifth, She passes the meridian at 1 min. past 7 o'clock, P.M. a little west of the mer. we may observe Algenib and Markab in the wing of Pegasus, the former at the distance of 5° , and the latter, of 21° from the Moon, and nearly north, on the east of the meridian, at the distance of 26° , is Mirach in the girdle of Andromeda: at 9, she is $50^{\circ} 37'$ from Aldebaran, and $89^{\circ} 19'$ from the first Star of the Eagle

Thirtieth, She passes the meridian at 48 min. past 10, P.M. and at the same time Rigel in the foot of Orion, is due south from her, at the distance of 29° , and Bellatrix, and Betelgeuze, in his shoulders are a little to the east of the meridian, as are also the three stars in his belt; directly north and distant 35° is Capella, the bright star in the Waggoner.

Mercury is a morning star this month, and on the 16th, passes the meridian, at 3 min. past 11, A.M.

Venus is an evening star this month, and may be seen soon after sun set, if the evening be clear. She passes our meridian on the 13th, at 48 min. past 2, P. M.

Mars is a morning star this month.

Jupiter passes our meridian on the 1st, at 38 min. past 6, and on the 25th at 3 min. past 5 P. M. having in the interim advanced about $8\frac{1}{2}$ deg. to the west.

Saturn continues very near the Sun during this month, and will not be easily seen.

Herschell passes our meridian on the 1st at 47 min. past 9 and on the 51st at 46 min. past 8 A. M. and is still too near the Sun to be easily seen.

****** In future it is our intention to publish on the last day of each Month, and consequently our Magazines will bear that date. Our next number will be dated on the 31st. inst. and accompanied with a Title-page and Index to the First Volume. Hereafter, we shall give a Title-page and Index at the end of every six months. Our Subscribers may then have their option of having the Magazines for the year bound in one or two Volumes.

Errata......Page 255, column 2nd, 22nd line from the bottom of the page, for flower read flour.—page 247, col. 2d, lin. 19 from the top, for repentance read penitence.

H. B. will oblige, by mentioning whether the article, supposed to have been written by Goldsmith, was ever published.
